

Project Design Phase Solution Architecture

Date	2 July 2026
Team ID	24A55A0518
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	4 Marks

Solution Architecture:

The Metro Ticket Generating System is developed on the ServiceNow platform using a layered architecture approach. Users book metro tickets through the Service Portal by selecting source station, destination station, passenger count, journey type, and payment mode. The system automatically calculates fares, generates ticket numbers and QR codes, and stores booking information in a centralized database.

- **User Interaction Layer:** Service Portal and Catalog Items provide a user-friendly interface for booking metro tickets.
- **Business Logic Layer:** Catalog Client Scripts, Business Rules, Script Includes, and Flow Designer automate fare calculation, ticket generation, QR code creation, and booking workflows.
- **Data & Service Layer:** ServiceNow custom tables store station and ticket data, while QR code generation, ticket validation, notifications, reports, and dashboards support secure ticket management and analytics.
